

Warren Moon
Quarterback, Houston Oilers

Orbiter -- the ultimate low impact treadmill on the market today.

Orbiter's patented horizontal suspension system combines the benefits of a treadmill with the flexibility of a trampoline. Because there is no rigid support below the running surface, heel strike force is dissipated and impact is

absorbed by the moving belt rather than by the supporting structure of the human body. This results in greater patient tolerance and shorter rehabilitation time while still maintaining the convenience and simplicity of a treadmill. Orbiter provides low impact rehabilitation at a fraction of the cost of underwater alternatives.
