

Q Who buys **ORBITERS**?

A **ORBITERS** are purchased for conditioning and rehabilitation by hospitals, professional sports organizations, colleges and universities, physical therapy chains and privately owned clinics, health spas, fitness clubs, fine hotels and conference centers, vacation resorts, weight loss centers, the United States Military, corporate and country club facilities, community centers, YMCAs, professional athletes and everyday people.

Q Why have **ORBITERS** become so popular?

A Pain and discomfort due to injury or other limiting condition turn runners into walkers and restrict many people to stationary bikes, stair climbers, ski machines, rowers, or enrolling in swimming or low-impact aerobic classes. The **ORBITER**, however, absorbs and dissipates the shock of walking and running while you're actually walking or running. By unloading the body in a perfectly natural manner, these necessary exercises may once again be fully enjoyed.

Healthy individuals prefer the **ORBITER** because it feels great! Former sprint world record holder Steve Williams, says:

*"**ORBITER** is the only piece of equipment that recreates that flowing, bounding feel of real running. The air time between strides that **ORBITER** gives to runners is the joy of sprinting that only world class athletes get to experience. It made me feel I had rediscovered the spring and bounce of my youth."*

A growing number of professional athletes train on the **ORBITER** because it saves their legs for actual competition. Many also believe it improves balance, and helps extend their careers.

ORBITERS are used to treat a wide variety of traumas. By eliminating much of the pain and discomfort of exercise, patients are more enthusiastic about physical therapy. A recent anterior cruciate ligament repair (ACL) study found that ACL test subjects using the **ORBITER** had no adverse responses, and reached full knee extension sooner than the ACL control subjects. **ORBITER'S** higher metabolic workload accelerates cardiovascular and cardiopulmonary conditioning, helping return patients to their normal lifestyles faster.

*Running or walking on THE ALL NEW **ORBITER** is an exhilarating One-of-a-kind experience, that has truly changed the tired old axiom, "No Pain - No Gain," to
ALL GAIN - NO PAIN!*
